RECD.	APR 20 2011

April 20, 2011

California Energy Commission
Dockets Office, MS-4
Re: Docket No. 02-REN-1038
1516 Ninth Street
Sacramento, CA 95814-5512

Gentlemen:

The California Energy Commission established the ERP Rebate Program to encourage the development and use of wind power to provide renewable energy to the California consumer. Dyocore, a California based company, has worked since 2004 to develop products that reach the same goal. Our investment and commitment has resulted in the development of the first widely available low cost wind turbine. The product is, in fact, so innovative that substantial investment has been committed to allow the permitting of household and small business installations of our products.

Dyocore has a network of 12 California distributors who undergo training and adhere to diligent standards as they relate to locations of installation of the products. Those 12 certified distributors have submitted approximately 800 R-1 applications (65 per distributor).

This current suspension has stopped the delivery and installation of many of those products. The irony of the installation is that our product is such a revolutionary technology that it allows us to deliver our product at an affordable price; a price so affordable that it qualifies for a 100% rebate under ERP guidelines.

Isn't the goal of the program to provide widely available, low cost renewal energy solutions? We implore the California Energy Commission to honor the previously submitted R-1s and continue a program that encourages green energy, green jobs, and innovative products like ours to help the State of California meet its renewable energy goals.

Respectfully submitted,

Ralph Bettencourt
CEO
